

Better extraction, with limits on the representation claim

F15-ND01 development diagnostic · five unchanged ordinary networks · original F15 complete support remains 0/5

A/B: point estimates on common validation arrays; no new complete-support assessment. C: original 560-row assessment on constructed calibration layouts.

D: two donor assignments; lower order difference is better. Thin lines reuse the same five networks. No retraining, new utility identification or technical-superposition claim.
